Lexmark Secure PKI (CAC/PIV) Print Release overview and benefits

User experience

From their PC, users simply print their job(s) to a designated windows print queue where the jobs are stored on a network server. This print queue uses the same driver for everyone.

The user then releases their job(s), from any print release device on their network. Access to print jobs is achieved via PKI card or network login if PKI card is not available.

Benefits of Lexmark Secure PKI (CAC/PIV)

Print Release

- } Protects sensitive, classified or personally identifiable information
- } Simplifies installation and support of multifunction printers (MFPs) utilizing one print driver
- } Reduces clutter around network devices and eliminates personal printers
- } Enhances network printing redundancy
- } Enables cloud and mobile printing from any smart device
- } Reduces the number of pages printed to decrease costs and lessen the environmental impact
